

The History of Harrow

Harrow has educated boys since 1243 but was officially founded by John Lyon under a Royal Charter of Elizabeth 1 in 1572. In 1608 the construction of the first school building began which was completed in 1615 and remains to this day. Harrow has 12 houses of 70 boys which will be expanded to 13 come September 2011.

Harrow removes 95% of its waste from Landfill

Enviro-Waste has been working in partnership with Harrow on their waste solutions for many years. With progressive thought and planning, Harrow is now removing 95% of its waste from Landfill and continues to strive forward as their new process for handling food waste can incorporate the addition of a CHP biomass generator or heating system.

RDF (refuse derived fuel) & Food Waste

When we evaluate waste on site, we are looking to take out the clean recyclates an easy simple fix. We now we have the option of removing food from this equation which predominantly leaves a material left in your waste stream of Dry Mixed Recyclates (DMR) this product, your waste, can now be reused as a valuable fuel, creating Green Energy.

Harrow School is in addition recycling its food waste.

End result being 100% diversion of food from Landfill. This solution protects Harrow from costly landfill tax increases, future proofs them against the impending food legislation of zero food waste to landfill (this legislation became effective in Ireland July 2010 [Click here for more information](#)) and of course promotes a healthy carbon foot print for its School.

Harrow Management Benefits

Enviro-waste's 10 year projected study for Harrow has shown that savings of over 25% will be attained.

Significant reductions to their carbon foot print and improved presentation on site where waste is currently stored, reducing health and safety issues.
