

MARLOW INTERNATIONAL

Our Case Study Solution for Marlow International

Marlow International is a spectacular example of innovative architecture, standing in its own grounds overlooking local landscape and yet within easy reach of Heathrow and London. Its 230,000 square feet of divided office suites allow for a maximum capacity of 1000 individuals.

History of Enviro-waste with Marlow

Marlow International is managed as part of the Knight Frank Portfolio who we have partnered successfully with for many years. We first started a project management process back in 2007 when predominantly their goal was to divert as much recyclable material away from landfill and yet still have a cost incentive business plan for going forward.

We estimated back in 2007 based on a 10 year plan potential cost savings could reach in excess of £140,000, we have measured this over the time we have been working with Marlow and confirm they are comfortably on target to meet this saving.

In addition to the this cost benefit, recycling volumes for purely glass and dry mixed recyclates are (excluding their cardboard which is pressed on site with our equipment in order that they gain a revenue) over 40,000 kg per annum all of which has avoided Landfill.

The Present & Future Plan of Marlow International

Our latest technology has been installed at Marlow for the handling of their food waste, this means over 13,000 kg of food per annum will be removed from landfill. This is a forward thinking solution, which incorporates environmental impact, future legislation of zero food to landfill and the potential option of gaining carbon reduction credits from the fuel produced by our equipment.[\(click here for the latest news\)](#).
